

Go with the Guidelines!

Follow the new North American Consensus Guidelines for Pediatric Nuclear Medicine for high quality images with low radiation dose.

These standardized doses have been tested at children's hospitals and will work at your hospital.

One size does not fit all...

There is no question – pediatric nuclear medicine helps us keep kids healthy and saves lives! When we image, radiation dose matters! Children are more sensitive to radiation. What we do now lasts their lifetime. So, when we image, let's image gently.

When a pediatric nuclear medicine study is the right thing to do:

- Follow the North American Consensus Guidelines for Pediatric Radiopharmaceutical Administered Doses.
- Determine the appropriate radiopharmaceutical dose by body weight.
